

Task 5. Evaluate Information Systems Artefacts (15% of course • 150 pts)

Criteria	Excellent	Good	Satisfactory	Unsatisfactory	Pts
Title, Abstract, and Keywords (1%)	10 to >9 Pts Title, abstract, and keywords precisely revised to reflect the evaluation undertaken and its key findings.	9 to >7.5 Pts Revised and clear, although one element still lags behind current progress.	7.5 to >5 Pts Revisions are superficial, and the abstract does not yet reflect the evaluation.	5 to >0 Pts Not meaningfully revised.	10
Conceptual Artefact Evaluation (5.5%)	50 to >44 Pts At least one key conceptual artefact is selected, with a clear argument for its importance to the research and rigorously evaluated using all four of the following methods, drawn from Hevner et al. (2004): a GenAI interview (observational), academic literature (SLR), informed argument (descriptive), and a scenario (descriptive). A human expert interview (observational) earns bonus marks. The evaluation process, criteria, and results are made transparent.	44 to >37.5 Pts The key artefact is evaluated with appropriate methods, although the justification of method choice or artefact selection could be sharper.	37.5 to >25 Pts Evaluation is present but ad hoc, with weak method justification or thin evidence.	25 to >0 Pts No meaningful evaluation of a conceptual artefact.	50
Design Artefact Evaluation (5.5%)	50 to >44 Pts The executable proof-of-concept app/game is rigorously evaluated against FURPS Functionality and Usability using all of the following Hevner et al. (2004) methods: analytical (static, dynamic, and optimisation), experimental (simulation), testing (black-box and white-box), descriptive (informed argument and scenarios), and SLR (academic literature). A human expert interview (observational) earns bonus marks. The process, criteria, and results are transparent and replicable.	44 to >37.5 Pts The proof of concept is evaluated using FURPS and other appropriate methods, with only minor gaps in rigour or transparency.	37.5 to >25 Pts The evaluation is shallow, with FURPS applied only partially or methods weakly matched to the artefact.	25 to >0 Pts No meaningful evaluation of the proof of concept.	50

Criteria	Excellent	Good	Satisfactory	Unsatisfactory	Pts
Results & interpretation (3%)	30 to >26 Pts Results are presented clearly in tables and figures and interpreted honestly, stating what they do and do not show without overclaiming. Each evaluation result is explicitly mapped back to the requirements and questions in the PIRQOA, showing whether the artefact solves the stated problem.	26 to >22.5 Pts Results are clear, but the interpretation is slightly overstated or understated. Most results are mapped, but a few are left unlinked.	22.5 to >15 Pts Unclear presentation or weak interpretation. Loose or partial mapping.	15 to >0 Pts Results are uninterpretable or misinterpreted. No link between evaluation and PIRQOA.	30
Presentation & Structure (0.5%)	5 to >4.4 Pts Formatting, clarity, flow, and visual layout are polished and professional throughout.	4.4 to >3.8 Pts Clear and well-organised, with only minor formatting lapses.	3.8 to >2.5 Pts Inconsistent formatting or unclear flow.	2.5 to >0 Pts Disorganised or unprofessional presentation.	5
Referencing & Academic Integrity (0.5%)	5 to >4.4 Pts Citations are correct throughout, the tone is consistently academic, and the work is fully original.	4.4 to >3.8 Pts Citations and tone are mostly correct, with only minor lapses.	3.8 to >2.5 Pts Citation style or tone is inconsistent, though originality concerns are minor.	2.5 to >0 Pts Frequent citation errors, unacademic tone, or concerns about originality.	5
